

CardSnap by Vision71

Privacy Facts Sheet

29 September 2026 | First draft | LIVE ADVENTURE DATA: NOT APPROVED

Source: commit 5d4279a and working tree; live homepage checked; Vercel free tier confirmed by project owner. **C** = code-confirmed; **U** = unconfirmed operational fact; **G** = missing control. Evidence IDs: 05-evidence-and-launch-checklist.md. Deployed revision is not verified; this is not readiness certification.

Required fact	Confirmed finding / outstanding confirmation
Hosting/database and region	Vercel; owner confirms free tier. Live URL: https://cardsnapbyv71.vercel.app/ (HTTPS 200). Account, function region and deployed revision unconfirmed. C : Dexie/IndexedDB BusinessCardScannerDB is on each user's browser/device, with no fixed database region. Confirm commercial-plan eligibility. [E1-E2]
Card image storage / duration	C/G : Saving a reviewed contact persists the submitted image Blob, filename, raw OCR, extracted and reviewed fields in IndexedDB. No expiry; persists until deletion, browser clearing or eviction. Backend uses memory; no image disk/object-storage write found. Provider/host retention is separate. [E2-E4]
Automatic image deletion	C/G : None after review or transfer. Clearing a preview does not delete a saved record. No live transfer is implemented. [E2-E4,E8]
Secured Google backend	C/G/U : Server calls Google Vision over HTTPS using a server environment API key. No app authentication, authorization or rate limiter found; production ingress controls and key restrictions unconfirmed. Server-side does not establish a secured pilot. [E3-E6]
OCR.space production fallback	C/U : Default both mode tries Google first, then OCR.space after an exception or missing Google key. Production mode and credentials unconfirmed. Local .env contains neither OCR key. Empty successful OCR does not trigger fallback. [E5]
Third-party recipients	C/U : Vercel (host), Google Cloud Vision, and OCR.space (a9t9 software GmbH) can receive submitted images and visible card details. Hosting/support/log/backup subprocessors and locations require account verification. Constant Contact receives nothing through current code. Device backups and user-shared exports require inventory. [E1,E5,E8-E10]
Roles / access	C/G : No application roles or tenant isolation. A person using the same browser profile can access its records; duplicate review can display existing details/images. Queue masking is not anonymisation. Infrastructure/support access roster unknown. [E2,E6-E7]
Authentication	C/G/U : No user login, sessions, MFA or identity provider in app/API. OCR API keys authenticate the server to providers, not users. External deployment protection unconfirmed. [E3,E5-E6]
Backup / audit / deletion	C/G/U : No active backup/restore workflow or user audit trail found. Timestamps and console errors are not an audit log. A local record-delete helper exists, without a current UI action; archive only changes status. Device/host backups, logs and deletion periods unconfirmed. [E2,E7,E9]
Constant Contact	C : No OAuth callback, API client, token store or transfer exists. CC_* settings alone do not connect it. XLSX helper exists but current Export button is unwired; no data is currently transferred by the application. [E8]
Incident reporting	G/U : No implemented reporting/response process or confirmed contact. Proposed agreement requires notice without undue delay, within 24 hours of awareness; owners, channels and drill must be approved. [E9; agreement §9]
End-of-pilot Vision71 access	G/U : No automated offboarding. Require owner-led removal of hosting/cloud/repository/support access, token/key rotation, local-copy deletion and signed evidence; browser data needs device-level action. [E10; agreement §11]

Release gate: confirm regions, commercial hosting eligibility, recipients/contracts, access, retention/deletion, incident owners and offboarding; review/sign the client agreement; reconcile public documents with the deployed build. Until then use only synthetic data. Technical owner: **pending**. Adventure approver: **pending**. Legal reviewer: **pending**.
